To be able to enable personnel to have access to high levels, the scissor lift is a work platform designed with a pantograph, which is a linked, folding support that shaped in an 'X' pattern. Upward movement takes place when pressure is applied to the outside of the lowest set of supports, propelling the work platform vertically by elongating the 'X' pattern. A bridge extends from particular platforms to allow convenient access to the work place.

The platform returns to the ground by release of a manual valve. The platform returns through simply releasing the pneumatic or hydraulic pressure. This is the key reason that scissor lifts are the equipment of choice at worksites.
